

PSET 0: Gradescope practice assignment

Purpose

This ungraded practice assignment is for getting comfortable with Gradescope before PSET 1 is due. The math is intentionally easy—the point is the *submission process*, not the content. When you upload, Gradescope will ask you to **assign pages to each question**. Please do this carefully: put each answer on its own page (or clearly separated), and match each question to the correct page(s) of your PDF. Submissions can be revised and re-uploaded as many times as you like before the deadline.

Problem 1: Simplify expressions

Simplify the following expressions as much as possible:

a. x^2x^3

b. $\frac{y^5}{y^2}$

c. $(2a)^3$

Problem 2: Solve a linear equation

Solve for x :

$$3x + 7 = 22$$

Problem 3: Graph sketching

Sketch the graph of $y = 2x - 1$, labeling the x - and y -intercepts. (A photo of a hand-drawn sketch is fine—this is good practice for including images or scanned pages in your Gradescope submission.)

AI and Resources statement

Please list (in detail) all resources you used for this assignment. If you worked with people, list them here as well. It is not enough to say that you used a resource for help, you need to be specific on the link and *how* it was helpful. W/R/T gen AI tools (including GPT, Claude, etc.) you cannot use them to do work on your behalf—you cannot put in any of the questions, etc. You can ask for help on logic / sample problems. If you do use GPT or other AI tools, you need to provide a link to your chat transcript. Any suspected academic integrity violations will be immediately reported to the Dean of Students.
